CLARICEPTIFY | AN ONTOLOGY OF CONCEPTUALIZATION

R1 REVIEW CANDIDATE | 137 concepts | 174 associations | 122 generalizations | 20 subject domains + Foundations | diagram-r1.1 | 25 October 2026

Complete vector view; zoom required. Domain colors are not stereotypes. Scientific acceptance not established; native OntoUML validation not assessed.

DOMAIN COLOURS, DEFINITIONS AND CONCEPT COUNTS

- **Conceptualization (9)**
  The formation and articulation of an explicit, purpose-oriented account of a subject.
- **Relations (5)**
  Descriptions of connections and attributed characteristics among conceptual elements.
- **Terminology (10)**
  Terms, definitions and their systematic organization for a selected subject.
- **Metaphysics (3)**
  General categories of being, state, change and temporal organization relevant to a subject.
- **Foundations (6)**
  A cross-domain support layer of general categories required for UFO-grounded typing.
- **Intentionality (4)**
  The goal-directed orientation of agents and the content guiding their choices.
- **Representation (12)**
  Forms and conventions through which conceptual content is externally expressed.
- **Metamodeling (4)**
  Models and activities that describe modeling constructs and classification levels.
- **Knowledge (1)**
  Articulable content about a subject that can inform understanding and conceptual choices.
- **Cognition (13)**
  Mental activities and states involved in attending to, interpreting and understanding a subject.
- **Modeling (17)**
  Activities and artifacts that express selected aspects of a subject as structured models.
- **Taxonomy (3)**
  Formation, application and hierarchical organization of conceptual categories.
- **Quality (5)**
  Criteria for judging the semantic adequacy and internal integrity of conceptual artifacts.
- **Abstraction (6)**
  The selection of relevant characteristics and organization of descriptions across levels of generality.
- **Structure (6)**
  Organization of conceptual elements, including part-whole descriptions.
- **Logic (4)**
  Formal expression, adopted assertions and restrictions on admissible interpretations.
- **Evaluation (4)**
  Activities and explicit criteria used to examine conceptual artifacts.
- **Semantics (7)**
  Meaning, interpretation and conditions for compatible understanding of representations.
- **Language (12)**
  Systems and activities for expressing and communicating content through signs and rules.
- **Ontology (1)**
  Explicit assumptions about the entities and relations admitted in a conceptual account.
- **Provenance (5)**
  Origins, supporting information and assumptions associated with conceptual content.

Solid line: association, navigability unspecified. Hollow triangle: generalization pointing to the supertype; no multiplicities on generalizations.
Association multiplicities count instances at their own class end. Crossings are not junctions. Fine grey leaders attach moved labels to their original locations.
Generalizations may share a hollow parent arrowhead. Shared arrowheads assert neither disjointness nor completeness of the subclasses.
Concept, Relation, Property and Instance are information descriptions. Relation is not automatically a UFO relator; part-whole descriptions do not assert UML composition.
Coverage and connector checks passed. Formal OntoUML/UFO satisfiability and expert semantic validation remain open. Read the specification for the 24 semantic constraints.
Notation reference: OntoUML Vocabulary v1.1.1 (https://dev.ontouml.org/ontouml-vocabulary/). Generalization and association use UML connector conventions.
